

IG Competitor Research — Skill Overview

A Claude skill that researches what's actually working in your niche on **Instagram and TikTok**, then breaks down the winning videos into a clean, visual report you can model your content from.

What it does

You give it competitor handles (or a saved list). It runs three phases automatically:

1. Scrape & rank. Pulls each competitor's recent short-form videos (tokscript MCP), ranks them by **likes**, surfaces real **view counts**, and scores each one's

breakout — how far it beat that creator's own weekly median — so a small account's outlier isn't buried under a big account's average post.

2. Break down the winners. For the top 3 per handle, it grabs the video, transcribes it, and analyzes it into:

- the **hook** (the real first line — *not* the caption)
- the **hook type** (spoken vs. on-screen text)
- the **content format** (talking head, listicle, demo, story...)
- the **full transcript**
- a one-line **concept breakdown**
- **why it worked**

3. Build the report. Assembles it all into a self-contained, visual **HTML report** — ranked cards, view + breakout badges, keyframe galleries, one-click-copy transcripts, "View original" links — plus a one-paragraph **Pattern** of what repeats across the pool.

What you get

A single shareable report that tells you at a glance: which videos are winning, the exact hooks driving them, the formats that recur, and the one pattern to copy this week.

The core insight it's built around

The hook is never the caption. Most people copy the wrong thing. This skill separates the *reach engine* (the hook/format that wins attention) from the *offer* (which lives in the caption behind a comment-keyword → DM funnel) — so you model what actually drives views.

How it's different from just looking at competitors

- **Ranks by breakout, not vanity** — true outliers surface regardless of account size.
 - **Transcribes the real hooks** — you see the first spoken line, not the caption.
 - **Repeatable** — a documented pattern every week, not a vibe.
 - **Scales** — scripts do the ranking and report-building; it handles multiple competitors without you sorting anything by hand.
-

What it needs to run

Requirement	For
<code>tokscript MCP</code> (Pro/Premium)	scraping IG/TikTok profiles
<code>uv</code>	runs the Python steps (auto-installs faster-whisper + pillow)
<code>ffmpeg</code> + <code>ffprobe</code>	keyframes + audio
<code>jq</code> , <code>python3</code> , <code>curl</code>	assumed present
Handles	inline, or in a <code>competitor-list.md</code>

How to use it

- Add competitor profile URLs to **competitor-list.md** (IG and/or TikTok).
- Run **/ig-competitor-research** (no args uses the list; or pass handles).
- Open the report in **research/**, read the Pattern, model the winners.
